ADVANCE STATEMENT OF HOURS OF WORK AND HOURLY AND WEEKLY EARNINGS OF MALE AND FEMALE WAGE-EARNERS AND SALARIED EMPLOYEES REPORTED BY LEADING MANUFACTURERS FOR THE LAST WEEK OF NOVEMBER, 1946.

9-1030

Dominion Statistician: Director, Labour and Prices Division: Chief, Employment and Payroll Statistics Branch:

Herbert Marshall H.F. Greenway M.E.K. Roughsedge

The present report summarizes the preliminary results of a new annual series of statistics, established in 1946, giving data of hours and earnings of male and female salaried employees and wage-earners in manufacturing establishments usually employing 15 or more persons. In the survey, which related to the last week in November, 1946, the firms were requested to provide statistics for all employees on their staffs in the last week in the month, with the exception of travelling salesmen, homeworkers, watchmen, charwomen and workers engaged on new construction; in some cases, data could not be supplied for route drivers and delivery men. Proprietors and firm members are not classified as employees.

Wage-Earners.- Men comprised 76.3 p.c. of all wage-earners, 90.5 p.c. of those in durable goods and 64.1 p.c. in non-durable goods manufacturing. Provincially, the proportion of male wage-earners ranged from 88 p.c. and 86.2 p.c. in Saskatchewan and British Columbia, respectively, to 71.3 p.c. in Quebec. While very few women were employed in heavy industry, they constituted more than 60 p.c. of all wage-earners in the women's clothing, men's clothing, hosiery and knit goods, and tobacco industries.

Weekly Wages .- Wage-earners in Canada were paid \$32.38 in the last week of November, 1946, the men receiving \$36.23, the women, \$20.08. British Columbia reported the highest averages, \$39.01 for men and \$23.05 for women. Average weekly wages for each sex were lowest in the Maritimes; men were paid \$33.58 and \$33.90 in New Brunswick and Nova Scotia, respectively, and women \$17.16 and \$17.18. The average of \$30.51 for all wage-earners in Quebec was slightly lower than in other provinces, reflecting the high proportion of female workers in that area. Wage-earners in the durable manufactured goods industries generally were paid higher-than-average wages. Automobile manufacturers paid \$43.61 a week, the highest average wage. Pulp and paper mills and printing and publishing firms also reported high pay levels. Men in fruit and vegetable canning, who were paid \$28.15 a week, and women in bread and bakery products, earning \$16.34, received rather less than employees of the same sex in other industries. Variations in weekly wages are related to the length of the working week, including the amount of short-time and overtime work, the sex distribution of wageearners, the proportions of skilled and unskilled and of part-time and casual workers and the extent to which the industry concerned is concentrated in areas where pay levels tend to be above or below the average.

Hourly Earnings. - Wage-earners in Canada averaged 74.1 cents an hour; the men were paid 80.7 cents, 30.5 cents above the average hourly rate for women. Wage-earners in British Columbia were paid 89.4 cents an hour, the men receiving 94 cents, the women, 58.8 cents. Average earnings of 71.9 cents for men in New Brunswick and 39.4 cents for women in Nova Scotia were lower than in other provinces. Average hourly rates in excess of one dollar were reported for men engaged in automobile and women's clothing manufacture; rates in ten of the thirty-eight leading industries were reported at less than 70 cents and hour. The hourly pay of women ranged from 72.3 cents in the automobile group to 41.8 cents in bread and bakery products.

Table 1.- Average Hours Worked, Average Hourly and Weekly Earnings of Male and Female Wage-Earners as Reported by Leading Manufacturers for the Last Week in November, 1946.

^{*} That is, manufacturing establishments usually employing 15 persons and over.

Salaried Employees, - Salaried employees, such as executive and office staffs managerial and clerical personnel made up 16.3 p.c. of all employees reported. Although 21.9 p.c. of all women employed in manufacturing establishments were classed as salaried staff as compared with 14.4 p.c. of all men, the salaried men were more numerous, constituting 65.9 p.c. of all salaried personnel. British Columbia, with 71.8 p.c., showed the highest proportion of men, while Ontario, with 63.6 p.c., reported the lowest. The proportion of employees classified as salaried staff varied considerably in different industries. The differences resulted, for the most part, from the varying nature of the typical industrial unit, varying requirements for professional personnel, and the organization of distributive functions. If the distribution of products is undertaken by the administrative staff of the manufacturing establishments, employees engaged in this work are included in manufacturing; if separate sales offices are maintained, the staffs are classified under the industrial heading of trade and, as such, are not included in this report. In general, the industries normally employing a large proportion of female wage-earners also reported a higher-than-average proportion of women among the salaried staff. Women constituted 49.3 p.c. of the salaried workers in the women's clothing and 47.2 p.c. in the hosiery and knit goods industries.

Weekly Salaries. In Canada as a whole, salaried employees of both sexes averaged \$43.85 in the last week in November, 1946, the men receiving \$53.21, the women, \$25.91. Salaried women in British Columbia were paid \$27.36, the highest provincial level. Salaried men in Ontario were paid slightly more than those in British Columbia, the averages being \$54.19 and \$54.10, respectively. Average salaries for both sexes were less than \$40.00 a week in Saskatchewan, Alberta and Nova Scotia. Industrial comparisons indicate that salaried men were most highly paid in the automobile, pulp and paper, distilled and malt liquors and preparation of nonferrous metallic ores industries, in each case averaging over \$60.00 a week. Average salaries for men in different industries were reported at levels varying from \$66.35 to \$43.74; women's salaries were more closely concentrated about the mean, ranging from \$31.17 to \$22.99. Among the factors influencing comparative salary levels are the incidence of head office staffs, the proportions of casual or part-time workers and highly-paid executive and managerial personnel (exclusive of owners) and the type of industrial activity.

Hours of Work.- Salaried employees worked 41.1 hours on the average during the last week in November, 1946, wage-earners averaged 43.7 hours. The difference in working time of male salaried staff and wage-earners, at 42 hours and 44.9 hours, respectively, was appreciable, while women employed in offices averaged only half an hour less than those classified as wage-earners. British Columbia, with the highest weekly wage, showed the lowest average working time, 41.2 hours. Male wage-earners in pulp and paper mills and silk and artificial silk plants throughout Canada averaged 48.7 hours a week. In the women's clothing industry, they averaged 38.2 hours and in automobile manufacturing, 39.9 hours. The average working time of female wage-earners ranged from 45.1 hours in silk and artificial silk goods to 35.3 in women's clothing. Tables to be published shortly indicated that 17.5 p.c. of Canadian wage-earners worked less than 40 hours, 31.7 p.c. worked 40 to 44 hours, 31.9 p.c. worked 45 to 48 hours and 18.9 p.c. worked more than 48 hours during the week reviewed.

In the report to be issued later, more detailed information will be published concerning the numbers, earnings and working time of men and women employed as salaried staff and wage-earners by leading manufacturers in Canada.

DEPARTMENT OF TRADE AND COMMERCE DOMINION BUREAU OF STATISTICS EMPLOYMENT STATISTICS SECTION OTTAWA - CANADA

ADVANCE STATEMENT OF HOURS OF WORK AND HOURLY AND WEEKLY EARNINGS OF MALE AND FEMALE WAGE-EARNERS AND SALARIED EMPLOYEES REPORTED BY LEADING MANUFACTURERS FOR THE LAST WEEK OF NOVEMBER, 1947.

9-1030

Dominion Statistician: Director, Labour and Prices Division: Chief, Employment Statistics Section: Herbert Marshall H.F. Greenway M.E.K. Roughsedge

Preliminary results of the second annual survey of hours and earnings of male and female salaried employees and wage-earners in manufacturing, pertaining to the last week in November, 1947, are given in the present report. The statistics relate to all employees of manufacturing establishments usually employing 15 or more persons, with the exception of travelling salesmen, homeworkers, charwomen and workers engaged on new construction. In considering the data on earnings in the following paragraphs, it should be recalled that since November, 1947, there have been considerable and very general increases in the salaries and wages 1 paid in industry.

WAGE-EARNERS.

An analysis of the data reported for wage earners shows that in manufacturing as a whole, women formed 22.7 p.c. of the total; in the durable 2/and the non-durable manufactured goods divisions, they made up 8.8 p.c. and 35.1 p.c. of the indicated wage-earners, respectively. A year earlier, the proportions of women were slightly higher, at 23.7 p.c. in manufacturing as a whole, 9.5 p.c. in the heavy industries and 35.9 p.c. in the light manufacturing industries. As in the preceding year, the lowest proportion of female wage-earners, 11.2 p.c., was reported in British Columbia, and the highest, 27.7 p.c., in Quebec. In each province, the proportion of women was almost one per cent lower than in November, 1946.

Hourly Earnings .- Average hourly earnings rose during the year in all parts of Canada, and in all industrial divisions. Table A appearing on page four indicates the proportions of the increases. In Canada as a whole, the advance in the earnings of men in the year was 3.4 cents an hour greater than in those of women but the increase in women's earnings in 1947 amounted to 15.9 p.c., as compared with a rise of 14.1 p.c. in men's earnings. The proportion of women's average hourly earnings to men's rose from 62.2 p.c. in November, 1946, to 63.2 p.c. in November, 1947.

Women's hourly earnings in industries producing durable manufactured goods advanced by 22 p.c. over their November, 1946, level. The increase was in part accounted for by upward adjustments in wage rates and in part by the employment of larger numbers of women in industries in which the pay was above average. In light manufacturing industries, the increase in the average hourly earnings of men was proportionately larger than that shown in women's earnings.

1/See the monthly bulletins on employment and payrolls, and average hours and average hourly earnings. See also page 7 of this press letter. 2/See footnote 2 to Table 1.

This report was prepared by W.I. Harvey and E.L. Hughes.

Hourly earnings were highest in British Columbia, where the general increase of 14.2 cents as compared with 1946 was also greater than in any other province. The percentage increase in Ontario, however, was higher for wage-earners of both sexes. Among men, the largest advances were in Ontario and British Columbia, while the hourly earnings of women showed an above-average percentage gain in New Brunswick. In Nova Scotia, the increase in women's hourly earnings in the year was small, a fact which to some extent is explained by variations in level of activity existing in the last week in November in 1946 and in 1947 in the seasonal food-processing industries, and partly by a decrease in the number of women employed in the comparatively highly-paid iron and steel industries in 1947.

In making industrial and geographical comparisons of average earnings, it is important to bear in mind the various factors influencing the levels of pay. Among these may be mentioned the varying proportions of men and women workers, and of highly skilled and relatively unskilled labour. The general levels of earnings in the provinces reflect the industrial distributions of their working forces as well as sex and occupational differences.

Weekly Wages. There were important increases in average weekly wages in all areas in November, 1947, as compared with November, 1946. Table B gives the provincial figures. The higher earnings resulted largely from wage increases, or in some instances from the payment of larger cost-of-living bonuses. Variations in industrial activity and other factors mentioned above also affected the levels of weekly wages for the different provinces.

In terms of money, men's earnings showed larger gains than women's, but in most cases, the percentages of increase in the earnings of women were higher. The proportion of women's average wages to those of men was slightly lower, on the average, in 1947, falling from 55.9 p.c. in the preceding survey, to 55.4 p.c. in the period under review. Although the highest weekly wages were reported in British Columbia, there were proportionally larger increases in the year in the weekly wages

paid to men and to women in Ontario, and to women in Alberta.

Hours of Work. The working time reported by leading manufacturers in Canada in the last week in November, 1947, averaged 43.7 hours for wage earners of both sexes, 44.9 hours for men and 39.7 hours for women. These figures were very close to those recorded a year earlier, the only difference being a decrease of three-tenths of an hour in the time worked by female wage earners in November, 1947.

The distribution of wage-earners in accordance with their working time in 1947 varied only slightly from the pattern of the previous year. The comparative data are given in Table C.

TABLE C.- DISTRIBUTION OF WAGE-SARNERS IN LEADING MANUFACTURING ESTABLISHMENTS IN CANADA, IN FIVE MAIN GROUPS OF HOURS WORKED, IN THE LAST WEEK IN NOVEMBER.

Millianno, Januarina y din prima Januarina di Januarina Januarina di Salarina	e w uerre serios centeriore		Propo	rtions	3

55 and over	7.6	8.4	9.2	8.4	2.0	2.2

It should be noted that the averages are based on short-time, full-time and overtime hours actually worked, plus any hours of paid absence. Important causes of differences in working time include the employment of part-time and casual workers, short-time or overtime work due to seasonal and other circumstances, variations in

working time on different jobs, absenteeism and labour turn-over during the week under review, as well as variations in the standard number of hours in the working week.

SALARIED EMPLOYEES.

Salaried employees, such as executive, managerial, office and factory clerical staffs, made up 16.1 p.c. of all employees of both sexes included in the 1947 survey. Women comprised 33.1 p.c. of the indicated salaried personnel, one p.c. less than in November, 1946. Office workers made up 21.8 p.c. of the total number of women reported in manufacturing in November, 1947, when the proportion was approximately the same as in 1946. An examination of the provincial figures shows that in British Columbia, 27.8 p.c. of the salaried workers were women. This was the lowest ratio recorded, while that of 37 p.c. in Ontario was the highest. In both provinces, the proportions of women were lower than in November, 1946.

The proportions of salaried persons to the total staff varied considerably in different industries. The variations result for the most part from differences in the size and type of the industrial unit, their varying proportions of professional personnel, and the organization of their distributive operations. Where separate sales offices are maintained, they are classified in the distribution industry and are excluded from this report.

Weekly Salaries. Salary increases were general throughout Canada between November, 1946, and November, 1947. On the average, the advances were greater in amount than those recorded for wage earners, although the percentage gains were smaller. A comparison of the figures appears Table D.

The general average of salaries and the salaried paid women were higher in British Columbia than in other provinces, while men's were highest in Ontario. In all areas, the increases in the salaries paid women, in money and percentages, were much smaller than those reported for male salaried personnel. In November, 1946, the average salary paid women was 48.7 p.c. of the average paid men; in 1947, the proportion was 47.6 p.c.

Hours of Work.- The average hours of the salaried personnel were somewhat lower than in November, 1946, and also below those worked by wage-earners, as shown in Table E.

TABLE E.- AVERAGE HOURS WORKED IN LEADING MANUFACTURING ESTABLISHMENTS IN THE LAST WEEK IN NOVEMBER, by

	Salaried	Employees	Wage-E	arners
Both Sexes	40.4	41.1	43.7	43.7
Male Female	41.2	42.0	44.9 39.7	44.9

As in the earlier period, there was a greater difference in working time of the men employed as salaried staff and wage-earners in November, 1947, than of the women. The standard week of office workers tends to be shorter, but higher proportions of wage-earners are reported as casual workers or as working short time. It must also be remembered that the time of salaried personnel is generally less carefully recorded than that of wage-earners, whose earnings are usually closely related to the hours worked.

COMPARISON WITH DATA FROM THE MONTHLY SURVEY OF EMPLOYMENT, PAYROLLS AND MAN-HOURS.

On the whole, there was close agreement in the results of the annual survey of hours and earnings in the last week in November, 1947, and in those of the monthly survey of employment and payrolls as at Dec. 1, 1947, relating to the situation in the final week, or pay week, of November. Table F gives the comparison and also shows the latest monthly figures at the time of writing. It should be noted that the figures of salaries and wages of the monthly survey relate to all employees of leading manufacturing establishments, while the annual survey excludes travelling salesmen, watchmen, charwomen, homeworkers and workers on new construction. The monthly figures for wage-earners relate only to those whose hours of work are recorded, while the annual data include all wage-earners with the above-named exceptions.

TABLE F.- AVERAGE EARNINGS AND AVERAGE HOURS OF EMPLOYEES REPORTED IN THE ANNUAL SURVEY OF HOURS AND EARNINGS IN THE LAST WEEK IN NOVEMBER, 1947, WITH COMPARISONS FROM THE MONTHLY SURVEYS OF EMPLOYMENT AND PAYROLLS AND AVERAGE HOURS AND AVERAGE EARNINGS.

Common company proving			
		Annual Survey 1947	Monthly Surveys For the Week Preceding Dec. 1, 1947 Feb. 1, 19491/

In the period from Dec. 1, 1947, to Feb. 1, 1949, there have been increases of 7.7 p.c. in the figure of average weekly salaries and wages, of 11.2 p.c. in the average weekly wages of hourly-rated wage-earners, and of 13.6 p.c. in their average hourly earnings.

Preliminary data for 22 cities will be released shortly. A later bulletin will give more detailed information for the provinces, cities and industries for the last week of November, 1947.

ADVANCE STATEMENT OF HOURS OF WORK AND HOURLY AND WEEKLY EARNINGS OF MALE AND FEMALE WAGE-EARNERS AND SALARIED EMPLOYEES REPORTED BY LEADING MANUFACTURERS FOR THE LAST WEEK OF OCTOBER, 1948.

1. Summary.

The present report contains the preliminary results of the third annual survey of hours and earnings of male and female wage-earners and salaried employees in leading manufacturing establishments in the last week of October, 1948. The data are comparable with those published in the 1946 and 1947 reports, except that they relate to the latter part of October rather than of November, as in the two preceding enquiries. As a result, they include differing proportions of workers in certain seasonal industries; for example, sawmills, food processing and apparel manufacturing which, are more active in October than in November. The questionnaire asked for information for all employees in manufacturing establishments usually employing 15 or more persons, with the exception of travelling salesmen, homeworkers, charwomen and workers engaged on new construction.

The gross weekly payroll figures from which the averages of hourly and weekly earnings of salaried employees and wage-earners were computed were made up of part-time, full-time and overtime earnings of the reported personnel, whether they were paid on an hourly, weekly, monthly, piecework or commission basis. Insentive, production, cost-of-living and other bonuses earned in the week were included, as were payments made to workers absent with pay during any part of the period covered by the survey.

In the eleven months elapsing between the 1947 and 1948 surveys, the average hourly and weekly wages of both men and women increased substantially. The average earnings of salaried workers showed a moderate increase. The proportions of women employed as wage-earners and as salaried personnel decreased to some extent in October, 1948. The average working time of wage-earners and salaried personnel fell insignificantly in the eleven months. The proportions of wage-earners working more than 48 hours in the week declined slightly, while the percentages working below 48 hours correspondingly increased.

2.- WAGE-EARNERS.

Wage-earners, defined as production workers, route drivers and delivery men, maintenance and related employees, comprise 83.3 p.c. of all persons reported by the manufacturers co-operating in the survey for the week ending Oct. 31, 1948. Homeworkers, charwomen and workers engaged on new construction were excluded from the survey. The proportions of women reported as wage-earners in Canada in the surveys for 1946, 1947 and 1948 are shown in Table A.

As in other years, the lowest proportion of female wage-earners, 11.3 p.c., was reported in British Columbia, where the heavy manufactured goods industries are

-203

of major importance. The highest proportion of women, 28 p.c., was reported in Quebec, where large numbers are employed in the textile and apparel and other light industries.

TABLE A. - PROPORTIONS OF WOLEN REPORTED AS WAGE-EARNERS IN MANUFACTURING.

Last Week of

Division	October, 1948	November, 1947	November, 1946 p.c.
All Manufacturing	22.4	22.7	23.7
Durable Goods Mfg.	7.9	8.8	9.5
Non-Durable Goods Mfg.	35.6	35.1	35.9

Hourly Earnings.— Substantial increases in average hourly earnings were general in the eleven months between the second and third surveys, although they were not so great as those reported between November, 1946, and November, 1947. Table 3 shows the averages of earnings in the three periods examined, and the percentage increase in 1948 as compared with 1947. The proportion of women's average hourly earnings to those of men again increased slightly, standing at 63.6 p.c. in the last week in October, 1948. In 1947, women's average hourly earnings were 63.2 p.c. of men's average hourly earnings, and in 1946, 62.2 p.c. The payment of increased wage rates on an "across the board" basis in many establishments during the period for which data are available no doubt contributed to this situation, which was also influenced by the varying levels of activity in industries employing larger or smaller numbers of women.

The average hourly earnings varied widely among the provinces, the highest figures being reported for both men and women in British Columbia. Men's earnings increased in the eleven months by more than 10 cents an hour in Alberta, British Columbia and Ontario, while women's earnings increased by 7.3 cents an hour in Quebec and by 7.0 cents in Ontario and British Columbia. The greatest percentage increase for men in 1948 over 1947 was recorded in Alberta, and for women, in Quebec. Variations in the general levels of earnings in different provinces are closely related to the industrial distributions of their working forces, with consequent occupational, sex and age differences, involving disparities in proportions of skilled, semi-skilled and unskilled workers.

Weekly Wages. Table 3 shows important increases in average weekly wages in all areas as compared with November, 1947; the gains over 1946 amounted to 27.4 p.c., 26.2 p.c. and 29.0 p.c., for both sexes, men and women, respectively. The advances in 1948, in the per capita weekly wages over the preceding year's levels were generally lower than those of 1947 over 1946, the exceptions being the figures for wage-earners of both sexes in Nova Scotia and New Brunswick, and for women in Quebec. Women received 16.4 p.c. of the gross amounts paid to the wage-earners reported for the week ending Oct. 30, 1948. Their average weekly wages were 56.7 p.c. of the average weekly wages paid men, as compared with 55.9 p.c. in 1947, and 55.4 p.c. in 1946.

Hours of Work. The average hours worked by wage-earners, according to the 1948 survey, varied insignificantly from those reported in 1946 and 1947. The percentage distributions of wage-earners in accordance with their working time were reasonably similar on the whole, in the three periods. The proportions of wage-earners working between 40 and 44 hours were higher in 1948 than in any earlier year, while the numbers and percentages working over 45 hours decreased slightly. The comparative data are given in Table B.

Table 4.- Percentage Distribution of Wage-Earners Reported by Leading Manufacturers in the Last Week of October, 1948, in Specified Groups of Hours Worked, in Canada and Provinces.

The number of wage-earners reported in the last week of October, 1948 are given in Table 1. * See footnote on Table

The averages are based on short-time, full-time and overtime hours actually worked, plus any hours of paid absence in the week to which the survey relates. Important causes of differences in working time include the employment of varying numbers of part-time and casual workers, short-time or overtime work due to seasonal and other circumstances, variations in working time on different jobs, absenteeism, and labour turn-over during the week under review, as well as variations in the standard number of hours in the working week in different areas and industries.

3.- SALARIED EMPLOYEES

Salaried employees, such as executive, managerial, office and factory clerical staffs, made up 16.7 p.c. of the employees reported by leading manufacturers in the last week of October, 1948. In this group were included 14.8 p.c. of the men and 22.7 p.c. of the women reported in the survey. Women made up 32.8 p.c. of the salaried personnel in 1948, 33.1 p.c. in 1947, and 34.1 p.c. in 1946. The proportions of women among the salaried workers reported in different provinces varied considerably, ranging from 27.6 p.c. in Nova Scotia and British Columbia, to 36.6 p.c. of the comparatively small number of salaried persons reported in Saskatchewan. Women comprised 28.9 p.c. of the salaried personnel in the durable goods manufacturing and 35.9 p.c. in the non-durable goods category. These percentages were slightly below the proportions of 29.4 p.c. and 36.1 p.c. reported for heavy and light industries, respectively, in 1947.

The ratios of the salaried personnel to the total staffs vary considerably in different industries; to some extent, this is because of differences in the classification of certain groups of employees. More important causes of variations are related to the size and organization of the typical industrial units, with their varying requirements for comparatively highly-paid professional personnel, and the degree to which distributive functions are undertaken by the administrative group. When separate sales offices are maintained, their employees are classified in the distribution industry, and are not included in this annual survey.

Weekly Salaries. Moderate increases in average weekly salaries were reported in all areas between November, 1947, and October, 1948. In general, the advances were smaller both in amount and proportion than those reported for the wage-earners. In the preceding year, the increases in the earnings of the salaried staffs over 1946 had been greater than those recorded for the wage-earners, although the percentage gains were smaller. The average weekly pay of salaried men was highest in Ontario and British Columbia, but Alberta showed the

largest advances, absolutely, and in relation to the 1947 level. Salaried women in British Columbia were, on the average, most highly paid; the increase of \$3.33 in their earnings in the eleven months was greater in amount and percentage than in any other province. The average salary paid women was 49.2 p.c. of the average paid men in October, 1948; in November, 1947, the proportion was 47.6 p.c. and in 1946, 48.7 p.c. It should be noted that occupational and age differences contribute materially to the disparities in the salaries of men and women.

Hours of Work. The average working time reported for the salaried staff in 1948 fell slightly from the 1947 level, and was 3.3 hours below the average reported for the wage-earners. Table C shows the general changes in average hours in the periods covered by the three annual surveys. In comparing hours for salaried and wage-earner staffs, it must be remembered that the time of salaried persons is generally less carefully recorded than that of wage-earners, whose earnings are usually related more directly to the hours worked. The standard week of office workers tends to be shorter; on the other hand, higher proportions of wage-earners are reported as casual workers, or as working short time.

EARNINGS AND HOURS IN MANUFACTURING, 1954.

Preliminary Statement

The annual survey of earnings and hours in the last week of October, 1954, showed moderate advances in wages and salaries, and little change in working time in the larger manufacturing establishments as compared with the 1955 enquiry. Moderate increases in rates of pay, some reductions in the length of the standard work week, changes in levels of activity in different industries, and differences in proportions of women contributed of the variations recorded in the general figures. Important reductions in staffs were reported in transportation equipment, iron and steel, electrical apparatus, textiles, clothing and a few other industries, but activity rose in food and beverages, wood and paper products, printing and publishing, nonmetallic minerals and petroleum products. These shifts in employment increased the proportion of wage-earners in the non-durable goods division from 49.8 ps.o. in 1953 to 51.9 ps.o. in 1954.

Averages of Hours and Earnings, Week Ending Oct. 31.

As in 1951, the 1954 survey called for a segregation of general office and clerical personnel from managerial, professional, supervisory, salesmen and other salaried personnel. The general figures for the office workers appear on page 4. The managerial and professional group made up 36.8 p.c. of the reported salaried employees; of these, 96.8 p.c. were men, who worked an average of 39.5 hours in the week for \$111.14. In 1951, the same group comprised 31.4 p.o. of the salaried personnel; men,forming 96.8 p.c. of the class, were reported as working much the same hours and earning \$99.73 for the week. Following is a comparison of the averages for the reported salaried employees and the office workers in the two weekly survey periods.

	A	ll Salari	ed Employe	es		Office	Workers

Both Sexes Men Women	39.5 40.0 38.2	39.0 39.4 37.9	65.98 77.55 38.42	77.81 90.99 45.00	39.4 40.2 38.2	38.7 39.4 37.8	51.14 60.68 37.77	59.29 70.94 44.16

The annual surveys relate to manufacturing establishments usually employing 15 or more persons. The firms are asked to report for all employees, except homeworkers, drawing pay in the last week of October. Data are not required for proprietors, firm members, pensioners, employees in separately-organized sales offices, nor for persons absent without pay throughout the week. The gross pay of the reported employees, before deductions for taxes, unemployment insurance, etc., is required, including bonuses, commissions, and payments to those absent with pay in the week. Full-time, short-time and overtime hours worked and hours of paid absence are reported.

More detailed industrial and geographical data will be published later in the final report.

8003-507 Prepared in the Employment Section of the Labour and Prices Division. 4-11-55.

EARNINGS AND HOURS IN MANUFACTURING. 1955.

Preliminary Statement

Preliminary figures from the annual survey of earnings and hours in manufacturing in the last week of October, 1955, indicate a half-hour increase in working time of wage-earners as compared with the 1954 survey week, practically no change in the hours of salaried personnel, and somewhat greater advances in average wages of men and in women's salaries than were recorded in the preceding year over 1953. Heightened activity was reported to varying degrees in most major industries with the greatest increases in employment in iron and steel products and transportation equipment.

Averages of Hours and Earnings, Week Ending Oct. 31.

		Hours		Hou	rly Earn	ings	Week	ly Earni	ngs
Category Wage-earners	1953 no.	1954 no.	1955 no.	1953 Ø	<u>1954</u> ¢	1955 ¢	1953	195 <u>4</u> \$	1955 \$
Both sexes Men Women	41.7 42.6 38.5	41.5 42.3 38.5	42.0 42.7 39.4	135.9 147.1 91.0	139.8 151.3 93.3	144.2 156.6 95.2	56.75 62.71 35.07	57.99 63.98 35.90	60.55 66.88 37.52
Salaried Employees Both sexes Men Women	39.0 39.5 37.9	39.0 39.4 37.9	39.1 39.6 37.9	• • • •	• •	• • • •	73.87 86.43 43.13	77.81 90.99 45.00	80.55 93.40 47.19

Men and women wage-earners and salaried employees again averaged higher earnings at the end of October, 1955, than they had in the preceding survey week. Percentagewise, the gains of wage-earners as a whole were greater and of salaried employees less than in the 1953-54 period, as indicated in the following table. Fay adjustments and changes in industrial composition, in proportion of women, and in amounts of full-time, short-time and overtime work were among the factors affecting the levels.

Percentage Increases in Average Earnings over Preceding Survey Levels.

		Wage-E	arners		Salaried E	Imployees
	Hourly E	arnings	Weekly E	Carnings	Weekly E	arnings
	1954	1955	1954	1955	1954	1955
	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.
Both Sexes	2.9	3.1	2.2	4.4	5•3	3.5
Men	2.9	3.5	2.0	4.5	5•3	2.6
Women	2.5	2.0	2.4	4.5	4•3	4.9

Women constituted 23 p.c. of the reported employees, approximately the same as in 1954. The proportion of women among wage-earners rose from 21.3 p.c. in 1954 to 21.6 p.c. in 1955 but declined among salaried employees from 28.7 p.c. to 27.8 p.c. in the same period.

The annual surveys cover manufacturing establishments that usually employ 15 or more persons. Firms are asked to report for all employees receiving pay for services rendered or paid absences in the last week of October and to exclude proprietors and firm members, pensioners, employees in separately-organized sales offices and persons absent without pay throughout the week. Gross-pay is required, including bonuses, commissions and payments to those absent with pay. The reported hours comprise full-time, short-time and overtime hours worked and hours of paid absence in the survey week.

The figures in Tables 1 and 2 are subject to revision in the final report, which will include more detailed industrial and geographical data and distributions of wage-earners by hours worked in the week surveyed.

8003-507 Prepared in the Employment Section of the Labour and Prices Division.

EARNINGS AND HOURS IN MANUFACTURING. 1956.

Preliminary Statement

Wages and salaries of men and women in manufacturing establishments co-operating in the annual survey of earnings and hours in the last week of October, 1956, showed greater gains over the 1955 survey levels than those for 1955 over 1954. Average working time was a fifth of an hour less than in the 1955 week, except for salaried women whose hours remained unchanged. Most industries reported higher employment than in 1955, with the largest increases of men in the durable goods division and of women in non-durable goods manufacturing.

Averages of Hours and Earnings, Week Ending Oct. 31.

		Hours		Hour	ly Earni	ngs	Week	ly Earni	ngs
<u>Category</u> Wage-earners	1954 no.	1955 no.	1956 no.	1954	1955	1956	195 <u>4</u>	1955 \$	<u>1956</u>
Both sexes Men Women	41.5 42.3 38.5	42.0 42.7 39.4	41.8 42.5 39.2	1.40 1.51 .93	1.44 1.57 .95	1.53 1.66 1.00	57.99 63.98 35.90	60.53 66.86 37.52	63.97 70.67 39.29
Salaried employees Both sexes Men Women	39.0 39.4 37.9	39.1 39.6 37.9	38.9 39.4 37.9	• •	• • • •	• •	77.81 90.99 45.00	80.57 93.50 47.02	85.23 99.05 49.31

Average hourly earnings were higher than in 1955 in all major industries, the gains ranging from 4 to 12 cents for men and from 2 to 9 cents an hour for women. Average weekly wages and salaries were also well above the 1955 levels, with overall gains of nearly 6 p.c. for men and nearly 5 p.c. for women. Percentagewise, the advances were generally greater than in the preceding few years. Pay adjustments, changes in industrial composition, in proportions of women and in amounts of short-time and overtime work contributed to the variations.

Year-to-Year Increases in Average Earnings.

			Wage-E	arners			Salari	ed Empl	oyees
	Hour	ly Earn	ings	Week	ly Earn	ings	Week	ly Earn	ings
Category	1954 p.c.	1955 p.c.	1956 p.c.	1954 p.c.	1955 p.c.	1956 p.c.	1954 p.c.	1955 p.c.	1956 p.c.
Both Sexes Men Women	2.9 2.7 2.2	2.3 4.0 2.2	6.2 5.7 5.3	2.2 2.0 2.4	4.4 4.5 4.5	5.7 5.7 4.7	5.3 5.3 4.3	3.5 2.8 4.5	5.8 5.9 4.9

Women made up 22.8 p.c. of the reported employees as compared with 23 p.c. in 1955. The proportion of women among wage-earners fell from 21.6 p.c. in 1955 to 21.4 p.c. in 1956 and among salaried employees remained constant at 27.8 p.c. The percentage of all employees classified as salaried personnel increased from 22.3 p.c. in 1955 to 22.9 p.c. in the later survey.

The annual surveys cover manufacturing establishments that usually employ 15 or more persons. Firms are asked to report for all employees receiving pay for services rendered or paid absences in the last week of October and to exclude proprietors, firm members, and employees in separately-organized sales offices. The reported payrolls represent the gross pay for the week, including bonuses, commissions and payments to those absent with pay. The reported hours comprise the hours worked at regular and overtime rates and hours of paid absence in the survey week.

The final report will provide greater industrial and geographical detail as well as distributions of wage-earners and salaried employees by amounts earned in the survey week.

Prepared in the Employment Section of the Labour and Prices Division.

8003-507

EARNINGS AND HOURS IN MANUFACTURING, 1957.

Preliminary Statement

Wages and salaries of men and women advanced and hours of work fell in the last week of October, 1957, from the levels indicated in the 1956 survey of manufacturing establishments. The numbers of wage-earners declined and of salaried employees increased in the year, with associated changes in industrial distributions.

Averages of Hours and Earnings, Week Ending Oct. 31.

		Hours		Hou	rly Ear	nings	Wee	Weekly Earnings			
Category	1955 no.	1956 no.	1957 no.	1955 \$	1956 \$	<u>1957</u>	1955	1956 \$	1957		
Wage-earners Both sexes Men Women	42.0 42.7 39.4	41.8 42.5 39.2	40.5 41.2 37.7	1.44 1.57 .95	1.53 1.66 1.00	1.61 1.75 1.05	60.53 66.86 37.52	63.97 70.67 39.29	65.31 72.21 39.49		
Salaried employees Both sexes Men	39.1 39.6	38.9 39.4	38.6 39.0	••	••	••	80.57	85.23	89.93		
Women	37.9	37.9	37.6	• •	• •	••	93.50 47.02	99.05 49.31	104.64		

Average hourly earnings of wage-earners generally were over 5 p.c. higher than in the 1956 survey week, with advances in the major industries ranging, for men, from 3 cents an hour in clothing manufacturing to 15 cents an hour in non-ferrous metal products and, for women, from 1 cent in non-metallic mineral products to 9 cents in the tobacco, paper products and transportation equipment industries. In the same period, average working time was lower, except for an increase of 0.9 hours for men in petroleum and coal products. With a shorter work week, the advances reported in most major industries were proportionately smaller, amounting to 2.1 p.c. in manufacturing as a whole. Salaries rose in the year by over 5 p.c., with gains in all major industries, except for non-ferrous metal products which showed a slight reduction in average earnings of salaried men. The advances in men's salaries ranged between \$1.18 a week in electrical apparatus to \$11.21 a week in tobacco products, and for women, between \$1.60 in miscellaneous manufacturing to \$7.05 a week in tobacco products. Pay adjustments and changes in industrial and occupational distributions, in levels of activity, in proportions of women and in amounts of short-time and overtime worked contributed to the variations.

Year-to-Year Increases in Average Earnings

			Wage-E	arners			Salaried Employees					
	Hou	rly Ear	nings	Weel	kly Ear	nings	Weekly Earnings					
Category	1955	1956	1957	1955	1956	1957	1955	1956	1957			
	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.			
Both sexes	2.8	6.2	5.2	4.4	5.7	2.1	3.5	5.8	5.5			
Men	4.0	5.7	5.4	4.5	5.7	2.2	2.8	5.9	5.6			
Women	2.2	5.3	5.0	4.5	4.7	0.5	4.5	4.9	5.1			

On the whole, manufacturing was rather less active than in the 1956 week, fewer wage-earners being reported and a slightly greater number of salaried employees. This

Prepared in the Employment Section of the Labour and Prices Division.

8003-507 6-8-58 resulted in a further increase in the proportions of salaried employees and particularly of salaried women. It should be noted in this connection that market conditions and other factors contributing to variations in production levels usually cause sharper fluctuations in numbers of wage-earners than of salaried employees.

	p.c.	p.c.	p.c.
Both sexes	22.3	22.9	23.8
Men	20.9	21.4	22.2
Women	27.0	27.8	29.2

The proportions of women among wage-earners declined from 21.4 p.c. in 1956 to 21.1 p.c. in 1957, mainly as a result of changes in industrial composition of the general figures, including reduced activity in certain branches of the food and beverages, textile and electrical apparatus industries that employ large numbers of women. Among the salaried employees, the proportion of women increased insignificantly to 27.9 p.c. from 27.8 p.c. in 1956.

Employees classed as office and clerical workers formed 61.2 p.c. of all salaried employees, 48.2 p.c. of the salaried men and 94.9 p.c. of the salaried women reported in 1957. In 1954, when such data were last collected, 63.3 p.c. of all salaried employee 50.1 p.c. of the men and 95.9 p.c. of the women were classed as office workers. Differences in proportions resulted in part from the exclusion of some supervisory and professional employees from the office worker category in 1957 who had previously been included therein. Women comprised 43.2 p.c. of the office workers in 1957. In the three years, average weekly salaries of the office workers generally increased by over 14 p.c. Among the major industries, pay levels ranged from \$66.73 and \$91.06 for men and from \$42.38 to \$59.59 in the 1957 survey week.

Hours and Earnings of Office Workers

	Average	Hours	Average Weekly Salaries
Category	1954	1957	1954 1957 Increase
	no.	no.	\$ \$ p.c.
Both sexes	38.7	38.4	59.29 68.02 11.5 /4.7
Men	39.4	38.9	70.94 81.13 11.4 /4 4
Women	37.8	37.6	44.16 50.79 11.5 15.0

The residual group of salaried employees, composed mainly of managerial, professional and supervisory employees and salesmen attached to plants earned an average of \$124.52 a week, \$126.52 for men and \$71.64 for women, as compared with \$109.67, \$111.1 and \$64.89 for both sexes, men and women, respectively, three years earlier.

The annual surveys cover manufacturing establishments that usually employ 15 or more persons. Firms are asked to report for all employees receiving pay for services rendered or for paid absences in the last week of October, and to exclude proprietors, firm members and employees in separately-organized sales offices. The reported payrolls represent gross pay for the week, including bonuses, commissions and payments to those absent with pay. The reported hours include hours worked at regular and overtime rates and hours of paid absence in the week.

The data contained in this publication are subject to revision in the final report, which will provide greater industrial detail for the provinces and metropolitan areas, along with comparable statistics from previous surveys.

Table 1 .- Average hours and earnings of reported wage-earners in manufacturing, week ending Oct. 31, 1957, Canada.

Earnings and Hours in Manufacturing, 19

Preliminary Statement

Hourly and weekly wages and hours of work of men and women wage-earners in manufacturing establishments were generally higher in the last week of October, 1958, than they had been a year earlier. Salaries also advanced in the year, but the hours worked by salaried men declined slightly and salaried women's hours were unchanged. Employment was lower, on the whole, particularly for wage-earners in the durable goods industries.

A moderate increase of 4 cents, or 2.5 p.c., over the 1957 figure of average hourly earnings was reported for wage-earners as a whole. Men's hourly earnings rose by 5 cents, or 2.9 p.c., with advances in the major industries ranging from 3 cents in leather products to 9 cents in printing and publishing. Women's hourly earnings increased by 3 cents, or also by 2.9 p.c.; the advances in the major industries ranged between 1 cent and 6 cents an hour, the largest being in printing and publishing, iron and steel and electrical apparatus and supplies. Since the advance in average hours of the men was only half that of the women, the increase in their average weekly wages was relatively smaller, amounting only to 3.9 p.c. as compared with 6.1 p.c. for the women. Changes in industrial distributions largely associated with Ley-offs of employees paid above or below the average, increased overtime at premium rates in several industries and pay adjustments were important factors contributing to the variations in average earnings from the 1957 levels.

The distribution of wage-earners according to the hours they worked in the 1958 survey week showed a significant increase in the proportion working 40 hours as compared with October, 1955, when the data were last collected. The proportions of wage-earners working less than 40 hours increased slightly, partly because of short time in some industries and part-time work and partly because of a slightly higher incidence of standard work weeks of less than 40 hours. On the other hand, the percentages of wage-earners working 44 hours and more were substantially reduced. Decreases in length of standard work weeks and in associated longer weeks resulting from overtime were mainly responsible. A summary comparison is shown below:

Distribution of Wage-earners by Hours Worked. 1955-1958

	Both	зөхөз	<u>M</u>	en	Wome	en
Range of hours	1955 p.c.	1958 p.c.	1955 p.c.	1958 p.c.	1955 p.c.	1958 p.c.
Under 35 35 - 39 40 41 - 43 44 - 48 Over 48	10 8 32 11 25 14	11 10 38 11 19	8 7 34 11 24 16	9 8 40 11 19 13	18 14 25 13 22 8	19 15 31 12 18 5

Average weekly salaries rose from October, 1957, in most industries, resulting in general gains of 4.2 p.c. for both sexes, 3.5 p.c. for men and 4.3 p.c. for women. Several industries showed little or no change, in some cases apparently being more affected by changes in composition of the reported staffs than by pay adjustments. The largest increases occurred in rubber products, where men's salaries advanced by \$6.80 a week and women's salaries by \$2.99. Average hours of salaried employees declined slightly on the whole, with men's time 0.2 hours less at 38.8 for the 1958 week and women's hours unchanged at 37.6.

Prepared in the Employment Section of the Labour Division.

8003-507

Women comprised 21.7 p.c. of the wage-earners, as compared with 21.1 p.c. in 1957. The increased proportion resulted mainly from the substantial curtailment of activity in such industries as transportation equipment and iron and steel where few women are employed. Among salaried employees, the percentage of women declined from 27.9 p.c. to 26.9 p.c., the decrease being largely attributable to reductions in numbers of female clerical workers in several industries where numbers of salaried men fell proportionately less, or increased in some cases.

As indicated in the following table, the proportions of all employees and of men classed as salaried employees continued to increase, while the proportion of women so classed was lower than in 1957. The sharper effect of the recession on wage-earners, changes in sex composition of salaried staffs and in their distributions among the different industries and the long-term trend toward higher proportions of white-collar workers in manufacturing, contributed to the variations from the 1957 data.

The annual surveys cover manufacturing establishments that usually employ 15 or more persons. Firms are asked to report for all employees receiving pay for services rendered and for paid absences in the last week of October, except that establishments on strike in that week are asked to report for a more normal period. Proprietors, firm members and employees in separately-organized sales offices are excluded. Reported payrolls represent gross pay for the week, including bonuses, commissions and payments to those absent with pay.

The data contained in this publication are subject to revision in the final report, which will provide greater industrial detail for provinces and metropolitan areas, along with comparable statistics from previous surveys.

Earnings and Hours in Manufacturing, 1959

Preliminary Statement

Wage-earners in manufacturing received higher average hourly and weekly earnings and averaged a somewhat longer work week in the last week of October, 1959, than in the corresponding 1958 survey week. Their average hourly earnings rose by 8 cents for men to \$1.88 an hour and by 3 cents for women to \$1.11 an hour, raising the general average for both sexes from \$1.65 to \$1.72 an hour in the year. These advances and slight increases in working time raised the average weekly wages by \$4.17, or 5.6 p.c., to \$79.20 a week for men, by \$1.46, or 3.5 p.c., to \$43.36 a week for women, and by \$3.50 or 5.2 p.c., to \$71.35 a week for all reported wage-earners. Pay adjustments contributed largely to the gains, although changes in industrial distributions of the reported workers, in amounts of overtime and other factors affected the direction and magnitude of variations from 1958 levels.

Average weekly salaries increased over the year by a proportionately smaller extent than wages. Men's salaries advanced by 4.1 p.c. from \$108.34 to \$112.77 a week, women's salaries, by 3.1 p.c., from \$54.07 to \$55.73 a week, constituting gains for salaried personnel as a whole of 3.6 p.c., from \$93.74 in 1958 to \$97.09 in the later survey week. Hours of salaried personnel showed little or no change in the year.

The number of wage-earners reported in the 1959 survey was substantially larger than in the 1958 inquiry, despite a fairly large decline in employment in transportation equipment (where losses in aircraft manufacture in Ontario outweighed gains in motor vehicle plants and other components of the industry division) and smaller reductions in chemical products, textiles, petroleum and tobacco products. In the same period, the number of salaried men declined while the number of women rose by much less than of women wage-earners; these changes resulted mainly from the release of substantial engineering and other salaried personnel in aircraft manufacture and smaller adjustments in a few other industries. The proportion of reported employees classed as salaried workers consequently fell from 24.4 p.c. in 1958 to 23.6 p.c. in 1959, representing reductions from 23.2 p.c. to 22.3 p.c. among men and from 28.7 p.c. to 27.9 p.c. among women. The proportion of women in the reported total of salaried workers rose from 26.9 p.c. in 1958 to 27.5 p.c. in 1959; in the wage-earner group the proportion of women increased from 21.7 p.c. to 21.9 p.c. in the same period.

Clerical workers and related employees among the salaried staff averaged \$69.89 in the 1959 survey week; the men averaged \$84.02 and the women, \$54.44 for the week. While the composition of this group is generally similar to that of office workers, as defined in the 1957 survey, the series are not fully comparable since a more precise definition of the category in 1959 resulted in numerous changes in allocation of employees by respondents between this category and managerial, professional, supervisory and other non-clerical personnel. The clerical workers comprised 53.0 p.c. of all salaried employees, 38.2 p.c. of salaried men and 92.1 p.c. of salaried women in 1959, as compared with 61.2 p.c. of all salaried employees, 48.1 p.c. of the salaried men and 95.0 p.c. of the salaried women in 1957. Women made up 47.7 p.c. of the clerical workers, a higher proportion of the group than that of 43.3 p.c. reported two years earlier. The change resulted in part from the alteration of the definition and in part from differences in industrial and occupational composition of the reported salaried staffs.

The reported data relate to manufacturing establishments that usually employ 15 or more persons and cover hours and gross earnings of employees at work or absent with pay in the last week of October. The figures are subject to revision in the final report, which will also provide greater industrial detail for provinces and urban areas, historical material, information on non-clerical salaried employees and on distributions of wage-earners and salaried employees by ranges of earnings in the survey week.

Prepared in the Employment Section of the Labour Division.

EARNINGS AND HOURS IN MANUFACTURING, 1960

PRELIMINARY STATEMENT

1962 1962

In the last week of October, 1960, factory wage earners received higher average hourly and weekly earnings but worked a fractionally shorter week than in the corresponding week in 1959. The general level of hourly earnings in manufacturing for both sexes increased from \$1.72 to \$1.77 an hour in the year, while the averages for the men rose by 5 cents to \$1.93 an hour and for the women by 3 cents to \$1.14. Notwithstanding decreases of 0.4 hours in working time of men and women, these advances raised the average weekly wages by \$1.04, or 1.5 p.c., to \$72.39 a week for all reported wage earners, by \$1.14, or 1.4 p.c., to \$80.34 a week for men, and by \$0.60, or 1.4 p.c., to \$43.96 for women. Pay adjustments and changes in industrial distributions of the reported workers, in amounts of overtime or short time and other factors contributed to the extent of variations from 1959 levels.

The percentage increase in average weekly salaries over the year was higher than that in weekly wages. Average weekly earnings of salaried personnel as a whole were up by 3.5 p.c. from \$97.09 to \$100.48 in the later survey week, men's salaries rose by 3.2 p.c. from \$112.77 to \$116.41 a week, and women's salaries by 4.2 p.c. from \$55.73 to \$58.05 a week. Hours of salaried personnel were practically unchanged in the year.

The number of wage earners reported in the 1960 survey was somewhat lower than 1959, a decrease which was counteracted to some extent by inclusion in the 1960 figures of milk bottling and pasteurizing plants which were not previously classified in manufacturing. Most of the decline occurred in the iron and steel and transportation equipment industries. Offsetting increases were reported in the non-durable goods manufacturing, particularly in foods and beverages. During the year, the number of salaried men increased in both durable and non-durable goods industries as a whole, while the number of salaried women increased sufficiently in the non-durables group to result in a small overall increase in manufacturing. These differing trends in employment for wage earners and salaried employees in the year resulted in an increase in the proportion of reported employees classed as salaried workers. These increases ranged from 23.6 p.c. in 1959 to 24.4 p.c. in 1960 for both sexes, from 22.3 p.c. to 23.1 p.c. among men, and from 27.9 p.c. to 28.7 p.c. among women. The proportion of women in the reported total of salaried workers fell from 27.5 p.c. in 1959 to 27.3 p.c. in 1960; in the wage earner group, the proportion of women was almost unchanged in the same period.

Average weekly salaries of clerical workers and related employees in the salaried staff, were \$72.16 in the 1960 survey week; the men averaged \$86.45 and the women \$56.66. These figures represented increases of \$2.25 for both sexes, \$2.41 for the men, and \$2.22 for the women over 1959. While the composition of this group is generally similar to that of the 1959 survey, some changes were reported by respondents in the allocation between this category and the residual category of managerial, professional, supervisory and other non-clerical personnel. Clerical workers comprised 52.7 p.c. of all salaried employees, 37.7 p.c. of salaried men and 92.7 p.c. of salaried women in 1960, compared with 53.0 p.c. of all salaried employees, 38.2 p.c. of the salaried men and 92.1 p.c. of the salaried women in 1959. Approximately 48.0 p.c. of the clerical workers were women, a slightly larger proportion of the group than that of 47.7 p.c. reported a year earlier. The change resulted mainly from differences in industrial and occupational compositions of the reported salaried staffs.

The reported data relate to manufacturing establishments that usually employ 15 or more persons, and cover hours and gross earnings of employees at work or absent with pay in the last week of October. Statistics in this preliminary report are subject to revision in the final report which will provide greater industrial detail for provinces and urban areas, historical material and some information on non-clerical salaried employees.

EARNINGS AND HOURS IN MANUFACTURING, 1963

PRELIMINARY STATEMENT

It should be noted that because of a lack of resources this survey was not taken in 1960 and 1961. All comparisons and changes in this statement therefore cover a period of three years, a time lapse which is an important consideration in the analysis of the data.

The reported data relate to manufacturing establishments that usually employ 15 or more persons, and cover hours and gross earnings of employees at work or absent with pay in the last week of October. Statistics in this preliminary report are subject to revision in the final report which will provide greater industrial detail for provinces and urban areas, historical material and some information on non-clerical salaried employees.

Total employment in manufacturing was 8.7 p.c. higher in 1963 than in 1960, an average annual increase, for the three years, of 2.9 p.c.. This is in sharp contrast to the previous three year period, 1957 to 1960, when there was a decline of 1.6 p.c. in the number of men and women employed in manufacturing. The largest decrease in this period occured during the recession of 1957 when employment in manufacturing fell by 4.5 p.c.. Between 1960 and 1963 the general level of average hourly earnings, for both sexes, increased 10.2 p.c. from \$1.77 in 1960 to \$1.95 in 1963, an average of 6 cents a year, thereby following closely the trend that was established early in the last decade. Over the last three years the average earnings for men rose 19 cents an hour and those for women 13 cents an hour, i.e., 9.8 p.c. and 11.4 p.c. respectively.

Both sexes worked a fractionally longer week in 1963, which accounts for the slight difference in the rate of increase between the average weekly wages and average hourly earnings; average weekly wages increased by 11.2 p.c. and average hourly earnings by 10.2 p.c.. Some of the principal factors that contributed to higher levels of earnings in 1963, were upward pay adjustments, shifts in the industrial distribution of workers forming a greater concentration in high wage industries, increases in overtime and decreases in short time.

The number of wage-earners in 1963 was up 8.6 p.c. over 1960, the number of employees in the durables industries increasing 13.7 p.c. and those in the non-durables industries 4.9 p.c.. Decreases in petroleum and coal products and in printing and publishing were more than offset by increases in the rubber and the textile (other than clothing) industries. The largest percentage increases in wage-earners were in the major groups covering the electrical apparatus and transportation equipment manufacturers, where the rises were of the order of 23.6 p.c. and 20.6 p.c. respectively. Combined, these industries report 34.7 p.c. of the wage-earners of the durable goods industries.

The percentage increase in average weekly salaries was smaller than that of the average weekly wages, however, weekly earnings of salaried personnel as a whole were up by 10.8 p.c. from \$100.48 in 1960 to \$111.29 in 1963. Between 1960 and 1963, salaries for men rose 10.4 p.c. from \$116.41 to \$128.50 a week, while women's salaries rose by 10.5 p.c. from \$58.05 to \$64.17 a week. The average weekly hours of salaried personnel were practically unchanged over the last three years, standing at 38.4 for 1960 and 1963.

Average weekly salaries of clerical and related workers were \$79.13 in the 1963 survey week, up \$6.97 or 9.7 p.c. over 1960; men averaged \$94.49 and women \$62.56. The ratio of men to women in this group of employees did not change since 1960, men making up 52 p.c. of the total number reported. Clerical workers comprised 51.4 p.c. of all salaried workers in 1963 compared to 52.7 p.c. in 1960. This very slight decrease is accounted for by a small increase in the "Other Salaried" group, a group that is made up of administrative, technical, professional and other non-clerical supervisory employees.

In 1963 the percentage of women employed in manufacturing was fractionally higher than in the earlier survey of 1960; the largest gain was in the wage-earner class where the rise was from 16.5 p.c. in 1960 to 16.9 p.c. in 1963. There was an overall shift from the salaried to the wage-earner classification of employees, but here too it was of very small magnitude and was mainly the result of occupational definition.
